# D-BOX

A multi-functional work table, toolbox, rubbish bin, and storage space for the cage

## Description

D-BOX is a uniquely designed product by Danilift that enhances the functionality of the cage. It serves multiple purposes, functioning as a work table, toolbox, waste bin, and storage space.

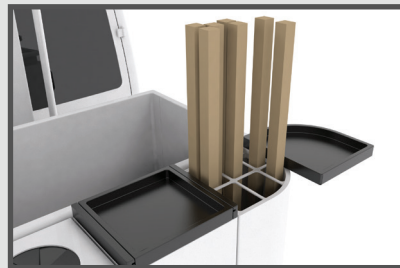

Developed in collaboration with Scandinavian platform operators, the D-BOX aims to optimize the operator's workspace, making their workday more efficient and easier. It maximizes space in the cage, offering a clear overview of tools, materials, and waste. Additionally, it reduces the need for bending to pick up items from the cage floor, promoting a more ergonomic and comfortable working position.

Mounted on the outside of the cage, the D-BOX shields the immediate work area and protects the operator. This external placement means it doesn't occupy any space inside the cage, providing the operator with more room to move and perform tasks.

The modular system is composed of three sections made from durable and lightweight plastic. These sections are adjustable, allowing them to be repositioned on the cage as needed and customized to hold various materials such as fluorescent tubes, safety lines, spray cans, and boxes.

## Technical specifications

<b>Dimensions:</b>	Each of the three modules are 81,5 X 35 X 30 cm
<b>Materials:</b>	Plastic, metal
<b>Weight:</b>	24 kg

The D-BOX is easy to assemble and disassemble and can be stored in the cargo space once the work is completed. It was developed with input from several Nordic power plants to simplify the daily work tasks of operators and users of access platform vehicles. The system is also adaptable to fit cages from other manufacturers.
